

REBEL P10

ATX 3.1 Power Supply Unit

Manual

Safety Instructions

This device is only to be used as a power supply unit for powering PCs and is intended exclusively for this purpose. Even when it is not being used for a long period of time, a power supply unit can still possess a high electric charge. For your own safety, be sure to follow the instructions below before using the device. The manufacturer's guarantee will become void if damage occurs to the product as a result of improper use or non-compliance with the following safety instructions.

CAUTION!

- Only use the device with accessories approved by the manufacturer and do not unscrew or modify the device without the manufacturer's consent. Repairs must only be carried out by authorized specialist personnel.
- Do not use the device in extreme environments. Also make sure that it always has sufficient distance to household heating appliances and radiators and other such sources of heat.
- Do not insert any objects into the openings of the device.
- The device is only intended for indoor use and within the appropriate level of humidity. Keep liquids away from the device and do not touch it with wet hands.
- Immediately disconnect the device from your household electricity supply if it comes into contact with liquid, or if smoke occurs, or if you notice any damage, for example, to the cables. Do not then use the device again.
- Only the outside of the power supply unit may be cleaned and only using a dry cloth. Before doing this, completely disconnect the device from your household electricity supply by pressing the power switch to "O" and pulling the plug of the power cord out of your wall outlet.

Specifications

General	550W	650W	750W	850W
■ Certifications	Cybenetics Silver	Cybenetics Bronze/ Silver 230 V	Cybenetics Silver	Cybenetics Silver
■ Form Factor	ATX 3.1	ATX 3.1	ATX 3.1	ATX 3.1
■ Continuous Power	550 W	650 W	750 W	850 W
■ ErP Compliant	✓	✓	✓	✓
■ Technology	DC/DC	DC/DC	DC/DC	DC/DC
■ MTBF	Min. 100,000 Hours	Min. 100,000 Hours	Min. 100,000 Hours	Min. 100,000 Hours
■ Operating Temperature	0 to +40 °C	0 to +40 °C	0 to +40 °C	0 to +40 °C

■ Rebel P10 550/ 650/ 750/ 850, Power Cord, Mounting Screws

Safety Standards and Protections

This power supply unit is designed for a household power voltage of 100–200 volts. It complies with CE, FCC and CB safety standards and is equipped with protection features that are designed to protect the device itself as well as the components connected to it. The device will unexpectedly shut down in the event of a protection function. You should then check immediately if there is a specific cause for the shutdown.

OPP (Over-Power Protection)

If the system demands more power than the specifications allow, the power supply unit will switch itself off to protect the electronics from damage.

OVP (Over-Voltage Protection) / UVP (Under-Voltage Protection)

This function shuts off the power supply unit to protect the components as soon as the internal voltage exceeds or falls below the specified limits.

SCP (Short-Circuit Protection)

Should a short circuit occur, the SCP function switches off the power supply unit and protects the electronics from damage.

OCP (Over-Current Protection)

If the current measured on a rail exceeds a specified value, the OCP function switches off the power supply unit to prevent damage.

OTP (Over-Temperature Protection)

If the heat level inside the power supply unit reaches a critical point, the OTP function switches off the device to protect the electronics.

Installation

Remove the old power supply unit from the PC case

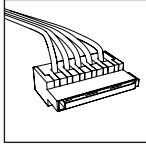

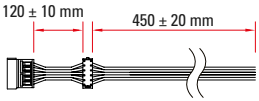

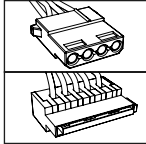

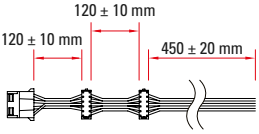

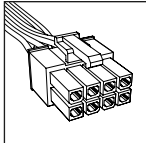

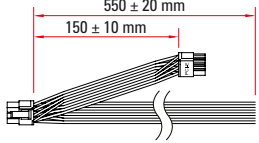

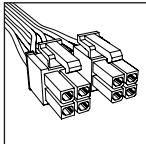

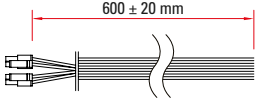

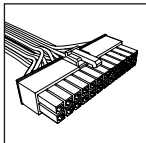

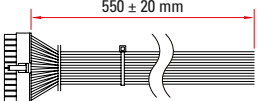

Installation

Install the power supply unit into the PC case

Troubleshooting

If the power supply unit is not functioning correctly, check the following points:

1. Is the power cord correctly inserted into your wall outlet and the power supply unit?
2. Make sure the on/off switch is in the “I” position.
3. Check that the 24-pin mainboard connector and the 4+4-pin CPU connector are correctly connected to the mainboard.
4. Check if the connectors of the cables are firmly plugged into the ports and headers of the peripheral hardware.
5. Pull the plug of the power cord out of your wall outlet and leave the power supply unit without power for approximately 10 minutes. This will cause a reset of the protective circuits.

If the system still fails to function, please contact support@sharkoon.com
